Jaga Heating Products Material Library:

Each Jaga BIM component comes pre loaded with standard colours available to that product. A wider range of material colours available are included in the 'Jaga Materials Library' on bimstore.

Once downloaded, this library (.adsklib file) should be saved to a location in line with your company BIM protocols. It can then be loaded into your projects by opening the 'Material Browser' in your project - Select 'Open Existing Library' and insert the 'Jaga Materials' library.
